

8 OCTOBER 2026

# Northern Metalworks

Manufacturing · More than 250 people · Board / C-level

## ARCHETYPE ANALYSIS

The company has moved from experimentation to adoption. There are cases in production, people using AI and some discipline. The next leap is to scale what works and shore up the axes that lag behind.

# The 8 axes in detail

From weakest to strongest. Start at the top.

## Governance

IN PROGRESS

50%

Some rules exist, but risk and the AI Act haven't been mapped yet.

→ Map use cases by risk level under the AI Act and train teams on the policy.

## Data

IN PROGRESS

50%

There are central systems, but the data isn't documented or easy to query yet.

→ Document the main sources and create a single access layer with clear permissions.

## Investment

IN PROGRESS

67%

There is some investment, but impact is judged by perception.

→ Define KPIs per use case (time, cost, revenue) and review results every month.

## Technology

IN PROGRESS

67%

Some systems are accessible and there is some technical capacity, still not enough to scale.

→ Strengthen the team with integration profiles and standardise how models connect to systems.

## Processes

IN PROGRESS

67%

There are pilots, but the path to production is unclear and many stall along the way.

→ Define go-to-production criteria (quality, cost, risk) and an owner for each pilot.

## Adoption

IN PROGRESS

67%

Some teams already use AI, but usage is uneven and rarely shared.

→ Extend licences to the whole company and build an internal library of prompts and proven cases.

## People

ADVANCED

84%

People are prepared and the culture rewards those who use and share.

→ Recognise and share the best internal cases and give protected time to experiment.

## Strategy

ADVANCED

84%

AI has clear sponsorship and measurable goals. Strategy is leading the transformation.

→ Review the use case portfolio every quarter and cut what doesn't show a return.

# Benchmark and 90-day plan

YOUR COMPANY VS. ESTIMATED MANUFACTURING SECTOR AVERAGE

Bar: your company · White mark: estimated sector average · Value: difference in points

| MOST SIMILAR COMPANIES |     | CLOSEST SECTORS       |     |
|------------------------|-----|-----------------------|-----|
| IKEA                   | 86% | Technology            | 86% |
| Typical SaaS scale-up  | 86% | Telecoms              | 82% |
| Duolingo               | 81% | Banking and insurance | 79% |
| Siemens                | 81% | Professional services | 77% |
| Moderna                | 81% | Energy and utilities  | 76% |

## 90-DAY PLAN

|                                                |                                                                                    |
|------------------------------------------------|------------------------------------------------------------------------------------|
| <div>DAYS 1 TO 30</div> <div>Governance</div>  | Map use cases by risk level under the AI Act and train teams on the policy.        |
| <div>DAYS 31 TO 60</div> <div>Data</div>       | Document the main sources and create a single access layer with clear permissions. |
| <div>DAYS 61 TO 90</div> <div>Investment</div> | Define KPIs per use case (time, cost, revenue) and review results every month.     |
